

Instructions For Attachment of No. 9 Adapter

No. 9 Adapter:

Directions for Attachment of No. 9 adapter to flat bottom stocks:

With a coin, loosen screws holding adjustable ears. Spread to widest position. With the unloaded gun inverted, place adapter aperture on stud, usually with ears toward butt-stock, attach bipod to fold forward. Properly align bipod and tighten. Close adjustable ears to side of fore-end and tighten screws with coin.

TROUBLE SHOOTING: Adapter will not go on stud: Replace stud with American standard or use rat-tail file on adapter aperture. Stock too Wide: If judicious bending of ears won't work, the adapter is unsatisfactory.

Harris Engineering, Inc., accepts no responsibility for damaged stocks or other liability resulting from the improper installation of the product.
